

# PMR III Plastic Mulch Retriever

Rocca Industries Pty Ltd provides the most efficient solution for all Plasticulture management processes.

The PMR 3 (Plastic Mulch Retriever) series is especially designed to suit large scale agricultural horticulture farmers.

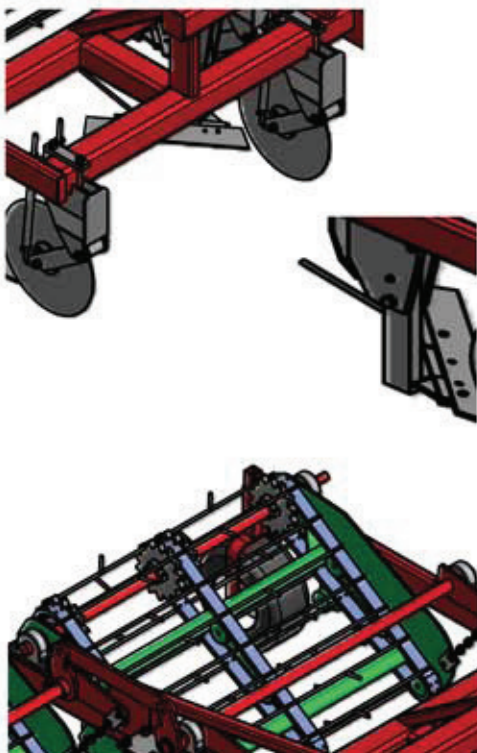

The PMR 3 machine performs the lifting and cleaning process of plastic mulch with a retrieving capacity of 5 - 7 hectares per hour, saving enormous labour and time costs. This simple, drop on the ground three row system requires only one person and one 120-150 hp Tractor.

A special designed offset three row construction ensures an easy, high speed run through the field and prevents blockage through build up of dirt and debris.

## Retrieving Process

The PMR 3 machine is built with a heavy duty frame and high quality hydraulics which allows for use in hardened soils at greater speeds.

The PMR 3 performs four functions at once.

1. The floating side coulters will cut away any vines or weeds, to prevent the debris from wrapping around the shanks and keeping of any heavy plant matter or dirt.
2. The adjustable width angled cutterbars loosen the plastic from the hard ground and lift it away from the soil effectively without tearing the plastic and leaving traces in the field for later hand collection.
3. Belt driven shakers with incorporated fingers lift the plastic mulch, shaking off all the dirt / debris and dropping it onto the ground for the collection process with an additional spool system.

### Specifications

- Plastic widths.....up to 60 inches
- Row Centres.....5 to 6 ft.
- Three Point Hitch.....standard Category 2
- Floating Coulters.....20 inches
- Trip shank.....3/8 shear bolt
- Hydraulic requirements.....1600 psi at 10 gallons/min  
opened or closed centre
- Raised bed height.....0 to 12 inches

### Optional Equipment

- quick 3 point hitch
- optional machine widths for wider plastic
- optional spool system for collection process
- brush for cleaning plastic mulch for recycling

Rocca Industries continues to expand and enhance the PMR line, to follow up on new and existing farm machinery, please visit our website:
